

Claim:

1. A communication device for hotel guests to communicate instructions to housekeeping services comprising a panel frame having a front side and a back side, said front side comprising:

at least one instructional display comprising an indicator, and indicator window and an instructional window, wherein said indicator is adjacent to said indicator window, and said indicator window is adjacent to said instructional window;

a room type display; and

a message display.

2. The communication device according to claim 1, wherein said front side further comprises an indicator slot adjacent to said indicator window, wherein said indicator is slideably mounted in said indicator slot.

3. The communication device according to claim 2, wherein said indicator is operatively connected to said indicator window, such that when said indicator is in a first position a positive command is displayed in said indicator window, and when said indicator is in a second position a negative command is displayed in said indicator window, and when said indicator is in a neutral position said indicator window is empty.

4. The communication device according to claim 3, wherein said indicator slot is a vertical slot.

5. The communication device according to claim 3, wherein said indicator slot is a horizontal slot.

6. The communication device according to claim 2, wherein said indicator slot is a vertical slot, such that when said indicator is in a first position said indicator is adjacent to a positive command in said indicator window, and when said indicator is in a second position said indicator is adjacent to a negative command in said indicator window.

7. The communication device according to claim 1, wherein said indicator is a rotateable disc operatively connected to said indicator window, such that when said rotateable disc indicator is in a first position a positive command is displayed in said indicator window, when said rotateable disc indicator is in a second position a negative command is displayed in said indicator window, and when said rotateable disc indicator is in a neutral position said indicator window is empty.

8. The communication device according to claim 1, wherein said front side further comprises an indented space and said indicator is an adhesive note, wherein said adhesive note indicator is removeably affixed in said indented space such that when said adhesive note indicator and removed from said indented space and placed in a first position, said adhesive note indicator is adjacent to a positive command in said indicator window, and when said adhesive note indicator is removed from said indented space and placed in a second position, said adhesive note indicator is adjacent to a negative command in said indicator window.

9. The communication device according to claim 1, wherein said instructional window comprises an instruction selected from the group consisting of "CHANGE SHEETS" and "CHANGE TOWELS."

10. The communication device according to claim 1, wherein said room type display comprises a room type indicator selected from the group consisting of "NON-SMOKING ROOM" and "SMOKING ROOM."

11. The communication device according to claim 1, wherein said message display comprises a flat dry-erase surface.

12. The communication device according to claim 1, wherein said message display comprises a note pad.

13. The communication device according to claim 1, wherein said message display comprises a card insert, wherein a message card is removeably inserted into said message display.

14. A communication device for hotel guests to communicate instructions to housekeeping services comprising a panel frame having a front side and a backside, said front side comprising:

at least one instructional display comprising an indicator slot, an indicator window, and an instructional window, said indicator slot being adjacent to said indicator window, and said indicator window being adjacent to said instructional window; said front side further comprising an indicator slideably mounted in said indicator slot, said indicator being operatively connected to said indicator window, such that when said indicator is in a first position a positive command is displayed in said indicator window, when said indicator is in a second position a negative command is displayed in said indicator window, and when said indicator is in a neutral position said indicator window is empty;

a room type display; and

a message display.

15. The communication device according to claim 14, wherein said slot is a vertical slot.

16. The communication device according to claim 14, wherein said slot is a horizontal slot.

17. The communication device according to claim 14, wherein said instructional window comprises an instruction selected from the group consisting of "CHANGE SHEETS" and "CHANGE TOWELS."

18. The communication device according to claim 14, wherein said room type display comprises a room type indicator selected from the group consisting of "NON-SMOKING ROOM" and "SMOKING ROOM."

19. The communication device according to claim 14, wherein said message display comprises a flat dry-erase surface.

20. The communication device according to claim 14, wherein said message display comprises a note pad.

21. The communication device according to claim 14, wherein said message display comprises a card insert, wherein a message card is removeably inserted into said message display.

22. A communication device for hotel guests to communicate instructions to housekeeping services comprising a panel frame having a front side and a backside, said front side comprising:

at least one instructional display comprising an indicator slot, an indicator window, and an instructional window, said indicator slot being adjacent to said indicator window, and said indicator window being adjacent to said instructional window, wherein an indicator is slideably mounted in said slot, and said slot is a vertical slot, such that when said indicator is in a first position said indicator is adjacent to a positive command in said indicator window, and when said indicator is in a second position said indicator is adjacent to a negative in said indicator window;

a room type display; and

a message display.

23. The communication device according to claim 22, wherein said instructional window comprises an instruction selected from the group consisting of "CHANGE SHEETS" and "CHANGE TOWELS."

24. The communication device according to claim 22, wherein said room type display comprises a room type indicator selected from the group consisting of "NON-SMOKING ROOM" and "SMOKING ROOM."

25. The communication device according to claim 22, wherein said message display comprises a flat dry-erase surface.

26. The communication device according to claim 22, wherein said message display comprises a note pad.

27. The communication device according to claim 22, wherein said message display comprises a card insert, wherein a message card is removeably inserted into said message display.

28. A communication device for hotel guests to communicate instructions to housekeeping services comprising a panel frame having a front side and a backside, said front side comprising:

at least one instructional display comprising an indicator, an indicator window, and an instructional window, wherein said indicator is a rotateable disc operatively connected to said indicator window, such that when said rotateable disc indicator is in a first position a positive command is displayed in said indicator window, when said rotateable disc indicator is in a second position a negative command is displayed in said indicator window, and when said indicator is in a neutral position said indicator window is empty;

a room type display; and

a message display.

29. The communication device according to claim 28, wherein said instructional window comprises an instruction selected from the group consisting of "CHANGE SHEETS" and "CHANGE TOWELS."

30. The communication device according to claim 28, wherein said room type display comprises a room type indicator selected from the group consisting of "NON-SMOKING ROOM" and "SMOKING ROOM."

31. The communication device according to claim 28, wherein said message display comprises a flat dry-erase surface.

32. The communication device according to claim 28, wherein said message display comprises a note pad.

33. The communication device according to claim 28, wherein said message display comprises a card insert, wherein a message card is removeably inserted into said message display.

34. A communication device for hotel guests to communicate instructions to housekeeping services comprising a panel frame having a front side and a backside, said front side comprising:

- means for communicating instructions to housekeeping services;
- means for indicating room type; and
- means for displaying a message.

35. A communication device for hotel guests to communicate instructions to housekeeping services comprising a panel frame having a front side and a backside, said front side comprising:

- at least one instructional display comprising an instructional indicator and an instructional window, wherein said instructional window comprises at least one set of instructions and said instructional indicator is slideably affixed to said indicator window, such that said indicator slides over said set of instructions;
- a room availability indicator; and
- a message display.

36. The communication device according to claim 35, wherein said instructional display comprises a first set of instructions and an second set of instructions, such that when said
